SUBJECT INDEX

Accelerated crucible rotation 81
Activation energy for deposits of silicon carbide 13
Aluminum 46
— copper alloy 339
— eutectic alloys 209
— hydroxide 39
— magnesium alloys 261
— (alpha) oxide: Cr^{3+} 17
— silicon alloy 137, 145
Ammonium
— bromide 309
— chloride 309
Arsenious selenide 334
Antimony
— sulphoiodide 113
— telluride 259
Apparatus
— for melt growth
— — by Czochralski method
— — — crucibleless method for silicon 281
— — by high pressure 113
— — by Kyropoulos method
— — — of barium fluorochloride 334
— — — of sodium–tungsten bronzes 63
— — by Verneuil method
— — — of ruby 17
— — by zone refining, cold crucible method 125
— for solution growth
— — by flux method
— — — pulling of KTN 120
— — by gel method
— — — of silver iodate 179
— for thin film
— — by liquid phase epitaxy
— — — of gallium–aluminum arsenide 32
— for vapor growth
— — by chemical transport
— — — of tungsten carbide 265
— — — of zinc sulphide by pulling the sealed tube 316
— — by sublimation, evaporation and condensation
— — — of ice 21
— — — of naphtalene 9
— — — of silicon carbide by induction heating 56

Barium
— fluorochloride 334
— sulphate 288
Beryllium 125
Bonding of gold wires to gallium phosphide 254
Boron 125

Cadmium 46
Celluloar growth 93, 209, 339
Characterization of alloys by neutron radiography 61
Cobalt–iron alloys 132
Cold crucible for zone refining 125
Collision breeding of nuclei 53
Constitutional supercooling 93, 209, 297, 339
Convection 137, 145, 217, 228, 261
Copper 132
Crystallization flow of fluid during growth 93

Dendritic growth
— of aluminum–copper alloys 339
— of ammonium chloride 309
— of tungsten carbide 265
— of zinc–cadmium alloys 297
Dysprosium–gallium garnet 3

Electric field effect on dendritic growth 309
Electron microscopy (scanning) studies of crystallization 39
Epitaxy, *see* Thin films
Erbium 125
Eutectic growth
— of aluminum alloys 209

Fluid flow in liquid metals 217, 228

Gadolinium
— aluminate 153
— gallium garnet 3, 195
Gallium
— aluminum arsenide 32
— arsenide 249
— phosphide 254
Germanium 125
— oxide 69

Hollow crystals of zinc sulphide 316

Ice 21
Impurity distribution 46, 173, 295
Indium 46
— bismuth antimonide 169

– oxide 183
Iodic acid (alpha) 277

Kinetics
– of solid state growth
– – of lead silicate 106
– of solution growth
– – surface diffusion in impure solutions 210
– of vapor deposition
– – of ice 21
– – of lead–bismuth sulphide 162
– – of silicon carbide 13, 97
KTN 120

Lanthanum aluminate 66
Lead 132
– bismuth sulphide 162
– silicate 106

Magnesium oxide 66
Mass transport, theory of 210
Melt growth
– by Bridgman method
– – of cobalt–iron alloys 132
– – of copper 132
– – of lead 132
– – of metals 132
– – of nickel 312
– – of nickel–iron alloys 132
– convection during 137, 145
– by Czochralski method
– – crucibleless method for silicon 281
– – of indium–bismuth antimonide 169
– – of rare earth gallium garnets 3, 195
– by Kyropoulos method
– – of barium fluorochloride 334
– – of sodium–tungsten bronzes 63
– by uniaxial solidification
– – of aluminum–copper alloys 339
– – of aluminum–magnesium alloys 339
– – of aluminum–silicon alloys 137, 145
– – crystal dimension temperature gradient 191
– – of metals 46
– – of zinc–cadmium alloys 297
– by Verneuil method
– – of ruby 17
Morphology of crystals
– of ammonium bromide 173
– of zinc sulphide 323

Naphthalene 9
Neodymium–gallium garnet 3
Neutron radiography, *see* Characterization by neutron radiography
Nickel 132
– carbonate 113
– iron alloys 132
Niobium dioxide 88
Nucleation
– of aluminum hydroxide 39
– of gas bubbles in liquids 323
– of metals 46
– of sodium chlorate 53
– surface, for large and small crystals 291

Perfection
– of aluminum eutectic alloys 209
– of gallium–aluminum arsenide films 32
– of gallium arsenide 249
– of niobium dioxide 88
– of rare earth gallium garnets 3, 195
– of silicon 281
– of silicon carbide 57, 185
Phosphorus (black) 113
Plutonium dioxide 181
Potassium tantalum niobate (KTN) 120

Rare earth gallium garnets 3, 195
Ruby 17

Samarium–gallium garnet 3
Silicon 125, 281, 327
– : P,As 73
– carbide, alpha 57, 97, 185, 245
– carbide, beta 13
Silver
– chromate 210
– iodate 179
Sodium
– chlorate 53
– tungsten bronzes 63
Solid state growth
– of lead silicate 106
Solution growth
– by flux method
– – accelerated crucible rotation theory of 81
– – of indium oxide 183
– – of KTN by pulling 120
– – of ^{17}O marked oxides 66
– – of plutonium dioxide 181
– – temperature programming during 153
– by gel method
– – of barium sulphate 288
– – of silver iodate 179
– – of strontium sulphate 288
– by hydrothermal method
– – of germanium oxide 69
– by low temperature method
– – of aluminum hydroxide 39
– – of ammonium bromide 173
– – of ammonium chloride 309
– – of iodic acid 277
– – of silver chromate 201
– – of sucrose 239
– – theory of 201
Striations during growth 132
Strontium sulphate 288

Temperature measurement during solidification 46
Thin films
– by liquid phase epitaxy
– – of gallium–aluminum arsenide 32
– by vapor phase epitaxy
– – chemical vapor deposition

— — — of gallium arsenide 249
— — — of rare earth gallium garnets 195
— — — of silicon 327
— — — of silicon: P,As 73
— — — of silicon carbide 285
Tin 46, 228
— cadmium alloys 61
Tungsten carbide 265

Vapor growth
— by chemical transport
— — of antimony telluride 259
— — of arsenious selenide 334
— — of indium oxide 183
— — of lead bismuth sulphide 162
— — of niobium dioxide 88
— — of silicon carbide 13
— — of tungsten carbide 263
— — of zinc oxide 272
— by evaporation, condensation, sublimation
— — of ice 21
— — of naphthalene 9
— — of silicon carbide 56
— — of zinc sulphide 316
Vapor–liquid–solid growth
— of silicon carbide 185

Whisker growth
— of silicon carbide 185
— of silicon carbide: La 97

YAG: Nd^{3+}, Gd^{3+}, Lu^{3+} 287
Yttrium boride 125

Zinc 46
— cadmium alloys 297
— sulphide 316
Zircon 125
